DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Imai et al (5,297,077).

3. Imai et al (Fig.5) disclose a memory device comprising a memory cell that includes a first capacitor (512) for storing therein electric charge corresponding to stored data, a first transistor (511) whose gate is connected to a word line, a dummy cell (54) that includes a second capacitor (541) having smaller capacitance than the first capacitor (col.19, lines 62-67 and second equation in col.20), a second transistor (542) whose gate is connected to a dummy word line (DWL51), a third transistor (543) for electrically connecting the second capacitor with a voltage line (Vd1, Vd2) in accordance with a precharge signal (PC51, PC52), a precharge circuit (55) for precharging the first and second bit lines to a second voltage (Vcc), a sense amplifier (56) for detecting a potential difference, wherein the capacitance of the second capacitor is substantially half of the capacitance of the first capacitor (col.19, lines 62-67 and second equation in col.20).

Allowable Subject Matter

4. Claims 7-12 and 15-16 are allowed.
5. Claims 3-6 and 13-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
7. Kato et al (6,567,298) disclose a semiconductor memory device having a dummy word line circuit.
8. Jae Kap (6,297,986) discloses a ferroelectric memory device having a dummy word line circuit.
